Pre-installation Survey

To submit an accurate bid for your cabling work (no surprises after you've signed on the dotted line), we'll ask you to complete a pre-installation site survey, and have one of our cabling designers visit your site to determine your exact cabling requirements.

Installations

PBSI uses only industry standard cables and interfaces and test each cable for continuity. To make support and upgrades easier, we clearly label every job site (cables, face plates, hubs, etc.). We install cables out-of-sight whenever possible, and securely terminate each cable end.

Post-installation Follow-up

After installation is complete, we'll review the job site with you and answer any questions you may have. In the future, if a concern arises, you can call the PBSI customer support line.

Expertise

PBSI employs experienced and trained wiring designers who will evaluate your immediate wiring needs and also help you plan for future wiring expansions.

Quality and Integrity

Job quality and integrity is important to you and it's #1 with us. Our team dedication to quality and integrity assures your complete satisfaction.

Timeliness

Our goal is to provide the best service possible. We will arrive at your site on time and stick to the time table agreed upon.

Comments from past installs . . .

“Unlike other vendors, simply interested in selling boxed solutions, PBSI worked diligently to help us define exactly what technology we did and did not need. PBSI worked hard to make the implementation process easy for us. They anticipated and managed issues without being asked, were flexible, and always got the work done on schedule and on budget.”

– Jeff Haas, Charis Healthcare

Reliable networks start with quality cable installation by PBSI.

70% of network downtime is caused by poor cabling.
