

PBSI–EHR Patient Portal

Patient Portal promotes healthcare & perpetuates preventative care.

- Provides a direct, secure communication line to patient-centered clinical support.
- Improves handling of patient interactions (appointments, forms, questions, etc.).
- Increases patient service efficiency for front desk, billing, and clinical staffs.
- Satisfies a key component of “Meaningful Use” measures.
- Retains practice control of data flow to patients.
- Gives patients a convenient - 24/7 - online tool to access their health records.

A survey conducted by Lake Research Partners, Inc., a public opinion and policy research firm (lakeresearch.com), found that people pay more attention and become more engaged in their health and medical care when they have easy access to their health information online.
